***Claim Rejection under 35 U.S.C. 103(a)***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lo et al (US 4,389,397; 6/21/83), Macy et al (US 5723447; 3/3/98), and Jon et al (US 6255350; 7/3/01). Lo suggests a method of applying to plants (crops) or mammals a non-aqueous composition comprising biologically active compounds (ivermectin, milbemycin), polyol (glycerol compound, propylene glycol), benzyl alcohol (monohydric alcohol), and emulsifier (polysorbate 80). Lo teaches the addition of water to the composition / method. See abstract, column 1 - column 6. Lo does not teach the composition / method comprising methyl pyrrolidone or erythromycin. However, Macy teaches a method of applying a composition comprising methyl pyrrolidone and erythromycin to animals and humans. See entire document. And Benning teaches a method of applying a composition comprising methyl pyrrolidone to plants. See entire document. It would have been obvious to one having ordinary skill in the art to combine prior art compositions / methods. One would have been motivated to do this since all prior art compositions / methods are applied to animals / plants.
